

Web Application developer

Accomplished Web Application Developer with 7.5+ years of experience in C#, VB.NET, MVC, PL/SQL, and MySQL, with strong insurance domain expertise. Currently contributing to the ASCEND application at LTIMindTree, with a focus on delivering high-quality, results-driven solutions and embracing emerging technologies

SKILLS

- Backend:** C#, MVC, VB .Net
- Framework:** ASP.NET MVC, .NET Framework, React js
- Library & UI Tools:** HTML, CSS
- RDBMS:** MSSQL, PLSQL
- Process & Tools:** Agile, GitHub, WEB Prompt and Rally Board
- AI Tools:** GitHub Copilot, Amazon Q

EDUCATION

B.E (ECE) from Kongu Engineering College, Erode

EXPERIENCE

Significant Highlights

- Handled development of insurance applications for The Hartford using C#, MVC, and .NET 8 Core, implementing premium calculations across multiple products.
- Served as Team Lead, managing and guiding the production support team to ensure timely delivery and high-quality code.
- Certified in .NET and insurance technologies; currently learning Generative AI Technology in my organization.
- Analyzed data to provide useful insights on product performance and future planning.
- Worked closely with team members to understand requirements and finalize design decisions.
- Worked on a .NET migration project, upgrading applications to the .NET 8 Core target framework.

PROJECT DETAILS

Project: The Hartford Insurance Company (Feb 2022 - present)

Company: LTIMINDTREE

Insurance-focused project involving multiple applications such as GLASS, ASCEND, WINS and IMAGERIGHT for policy creation across products. Responsible for raising and resolving incidents within SLA timelines

- Worked as a Developer in the Insurance domain for The Hartford, contributing to application development using C#, MVC, and participated in migration projects leveraging .NET 8 Core.
- Collaborated with Business Analysts to analyze requirements and implement premium calculation logic across multiple insurance products including PCP, AMS, AML, Marine.
- Created a Knowledge Error Database (KEDB) to track issues, aid debugging, and share with the team. Updates are posted in the

Rally Board, and required data is maintained in Excel for rate calculations on installment requirements.

- Developed and optimized SQL Server databases by implementing operations to support application functionality and data management.

Project: CHOLA MS (Feb 2019 - Jan 2022)

Company: TATA Consultancy Services

First insurance-focused project involving both web and desktop applications, covering Motor, Fire, Engineering, and Healthcare products. Responsible for delivering policy documents to clients and handling endorsement processes

- Worked as web developer in developing a website for a residency in .Net framework and C# programming language.
- Developed Oracle database objects (tables, views, procedures, packages) and designed master pages with premium calculation logic for various insurance products.
- Managed production support by troubleshooting and resolving critical bugs across multiple modules, ensuring system stability and seamless business operations
